A FREE PRINTABLE GUIDE

The 7-Day *Metabolic Reset*

A day-by-day fasting plan that eases you from a 12-hour overnight fast to a sustainable 16:8 — grounded in peer-reviewed research, built for real life.

BEFORE YOU START

Ease *in.* Don't *jump* in.

Most beginner fasting plans drop you straight into a 16-hour fast on Day 1 and lose 80% of people by Day 3. That's not because fasting is hard — it's because the body needs about a week to shift from sugar-burning to comfortably using its own fat stores. Rush that adaptation and you get headaches, brain fog, and the overwhelming urge to quit.

This plan ramps one hour at a time. You start at a 12-hour overnight fast — something most people already do without thinking about it — and stretch the window gradually until 16:8 feels ordinary by the end of the week.

Each day has one job. That's it. Seven days from now, the window that felt impossible on Day 1 will feel like an ordinary morning.

GROUND RULES

Five rules that make *this* work.

i **Water is always allowed.**
So is black coffee and plain tea. Nothing with calories or sweeteners during your fasting window.

ii **Break the fast gently.**
Protein and fiber first. A giant carb-heavy meal after a long fast is how people end up feeling worse than when they started.

iii **Eat enough in your window.**
This is not a starvation plan. Your eating window should still deliver the food your body needs for the day.

iv **Sleep is non-negotiable.**
Short sleep sabotages every hormonal benefit fasting offers. Protect seven hours or more.

v **Listen to your body.**
Mild hunger is expected. Lightheadedness, shakiness, or heart racing is not — break the fast and rest.

BEFORE YOU BEGIN

This plan is not safe if you are pregnant or breastfeeding, have a history of eating disorders, have type 1 diabetes, take medications that require food, or are under 18.

AT A GLANCE

The whole week, *one page*.

Print this page. Tape it to the fridge. Each day builds on the one before — the window only extends by about an hour at a time.

DAY	FOCUS	WINDOW	THE ACTION
01	**The overnight baseline**	**12:12**	Finish dinner by 7pm, don't eat again until 7am. Prove the rhythm is doable.
02	**Extend by two hours**	**14:10**	Push the first meal from 7am to 9am. The first hunger wave passes in about fifteen minutes.
03	**Hydration + electrolytes**	**14:10**	Hold the window. Add a pinch of salt to your morning water. Most "hunger" is dehydration.
04	**The adjustment day**	**14:10**	Expect energy fluctuations. Your body is switching to fat for fuel. Normal. Temporary.
05	**Push to fifteen + food order**	**15:9**	First meal at 10am. Eat protein and fiber before carbs — same food, 29-54% less blood sugar impact.
06	**The target pattern**	**16:8**	Noon to 8pm. The most research-backed intermittent fasting window in the clinical literature.

01

DAY ONE

The *overnight* baseline.

Fast **7pm → 7am · *Eat* 7am → 7pm**

You've probably already done a 12-hour fast a hundred times in your life without ever calling it that. Tonight, you're going to do it on purpose. That's the whole difference.

Finish dinner by 7pm. Brush your teeth — a surprisingly strong signal to your brain that the kitchen is closed. Drink water. Go to bed. When you wake up, wait until 7am to eat.

TODAY'S ONE FOCUS

Prove the rhythm is doable. Nothing more.

DAY TWO

Extend by *two hours*.

02

Fast **7pm → 9am · *Eat* 9am → 7pm**

Today you push the first meal from 7am to 9am. Two hours. That's the whole assignment. Drink water or black coffee until then, and let the morning happen on its own.

Somewhere between eight and nine you may get your first real hunger wave. Watch it like you'd watch weather. Most first-time fasters are shocked to learn the wave peaks for about fifteen minutes and then completely passes on its own.

TODAY'S ONE FOCUS

Surf the first wave. Notice it pass.

DAY THREE · HYDRATION + ELECTROLYTES · 14:10

Most of what feels like hunger in a fourteen-hour fast is actually *mild dehydration or low sodium*. Fix the minerals, and half the struggle disappears.

The morning mineral drink: twelve ounces of water, a generous pinch of sea salt, a squeeze of lemon. Drink it before coffee. Most people are shocked at how much easier the fast feels when they fix this one thing.

04

DAY FOUR

The *adjustment* day.

Fast **7pm → 9am** · ***Eat*** **9am → 7pm**

Day four is the day most people quit. It's also the day most people miss the point of. Today you may feel a little off — energy dips in the late morning, a weird restlessness, maybe a light headache or some brain fog.

This is not the fast failing. This is your body running out of stored sugar and beginning — for the first time in possibly years — to actually tap into its fat stores for fuel. The grumpiness is metabolic, not moral. It's a one-time adjustment cost, and it typically passes within 24-36 hours.

TODAY'S ONE FOCUS

Hold the window. Don't quit. Sleep early.

DAY FIVE

Push to fifteen, and *the food order* trick.

05

Fast **7pm → 10am · *Eat* 10am → 7pm**

One more hour. After yesterday's adjustment, this should feel noticeably easier — because you're now actually running on fat-fuel, not on willpower.

THE RESEARCH

Fiber + protein *before* carbs. Same food, 29-54% less blood sugar impact.

Multiple clinical trials show that eating vegetables and protein first and saving carbs for last drops post-meal glucose and insulin spikes 29-54%. Same calories. Same food. Different order.

06

DAY SIX

The *target* pattern.

Fast **8pm → 12pm** · ***Eat*** **12pm → 8pm**

Today is the one. First meal at noon, last meal by eight. A clean 16:8 — the most research-backed intermittent fasting window in the clinical literature, and the one you're going to keep after this week is over.

Notice how different this feels from how Day 1 would have felt if you'd attempted it cold. Your body has spent five days rehearsing for this exact moment. The hunger waves are shorter. The morning energy is steadier. This is what the adaptation bought you.

TODAY'S ONE FOCUS

Sit inside 16:8. Notice how ordinary it feels.

DAY SEVEN · 16:8

Reflection + sustain plan.

Hold 16:8 one more day. The real work today is deciding which version of this pattern you're keeping. Seven days in, you know things about your own body that no article could have told you. Write them down while they're fresh.

What *surprised* me

What was *harder* than expected

What I'm *keeping*

One *change* to my food

YOU MADE IT

The body is *adaptable.* That's the whole *discovery*.

Seven days ago, a sixteen-hour fast might have sounded impossible. Today, you just finished two of them in a row. Nothing changed about your willpower. What changed is that your body rehearsed the pattern long enough to stop protesting it.

Metabolic Manna is built on the belief that the body is a gift worth stewarding, and the evidence for what actually works is clearer than the wellness industry wants you to think. Thank you for trusting us with your first week.
